Livello 1

[1/6] Level 1: Hello, world of XSS

Mission Description

This level demonstrates a common cause of cross-site scripting where user input is directly included in the page without proper escaping.

Interact with the vulnerable application window below and find a way to make it execute JavaScript of your choosing. You can take actions inside the vulnerable window or directly edit its URL bar.

Mission Objective

Inject a script to pop up a JavaScript `alert()` in the frame below.

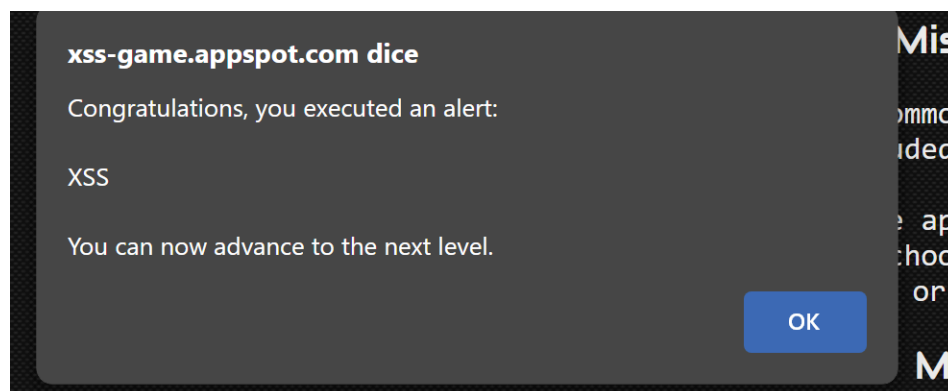

Once you show the alert you will be able to advance to the next level.

Advance to next level >>

Your Target

Inserire questo script nell'input: `<script>alert('XSS')</script>`

Livello 2:

Inseriamo lo script nel messaggio per creare l'alert: ``
